

```
public class Pegawai {  
    private String nama;  
    public double gaji;  
}  
  
public class Manajer extends Pegawai {  
    public String departemen;  
  
    public void IsiData(String n, String d) {  
        nama=n;  
        departemen=d;  
    }  
}
```

The screenshot shows the Android Studio IDE. The top bar displays the time 09.03 and battery level 56%. The editor window shows a file named 'manajee.java' with the following code:

```
1 public class Pegawai {  
2     public String nama;  
3     public double gaji;  
4 }  
5  
6  
7 public class Manajer extends Pegawai {  
8     public String departemen;  
9  
10    public void IsiData (String n, String d) {  
11        nama=n;  
12        departemen=d;  
13    }  
14 }
```

Below the editor is a terminal window titled 'Terminal' showing the error message: 'Main class not found.' The bottom of the screen shows the standard Android navigation bar with back, home, and recent apps buttons.

Jadi di Dalam Percobaan Tersebut Kita Hanya Mengganti dari "Private String nama;" jadi "Public String nama;"
